

---

Dear Reader,

My name is Dmitrii, I come from Yakutia, the coldest region on Earth inhabited by people. From an early age, I was fascinated by mathematics, generally enjoying the exact sciences. I graduated from a physics-mathematics class and entered the University, enjoying both studying and student life. Every year, my friends and I went rafting in various beautiful places in Yakutia. Even before finishing university in Yakutsk, I started working part-time at an innovative company, "Display", which was the leader in IT solutions in the market of the Republic at that time. All IT specialists, from small to large, sought to work for this company. I was lucky with the team, and we worked a lot on projects, constantly trying to learn something new. My next step was to join a company that transforms the appearance of cities - a design bureau, where I worked for almost 15 years, progressing from software developer to the director. At different stages of my life, I have always felt the need for something modern, and I have always tried to find applications for these solutions to make the lives of people better.

Right now I'm using the ReactJS framework which inspires me to create efficient and user-friendly interfaces. I strive to improve my skills and constantly study new approaches and best practices in this area. I am also very interested in ML, especially in the tasks of dataset preparation and analysis, recognition tasks.

Outside of work, I enjoy hiking & fishing, and this hobby has taught me to appreciate cooperation and interaction in a team. I am convinced that the ability to work effectively in a team is key to achieving common goals and successfully completing projects.

My experience has also taught me to develop and cultivate complex thinking processes, allowing me to solve technical tasks efficiently and creatively (thanks to the team of architects who see the world completely differently).

My fantastic family plays an important role in my life. I have a wonderful wife and a 14-year-old son who is passionate about robotics, and I proudly support him in this pursuit. Our family also enjoys the company of our beloved pet dog, Fozzy, who brings joy and laughter to our home.

I am interested in the opportunity to apply my experience and skills to your team and contribute to the development of your projects.

Sincerely, Dmitrii Artemev
